Tutorial: Fuel Dashboard

How to use the fuel dashboard

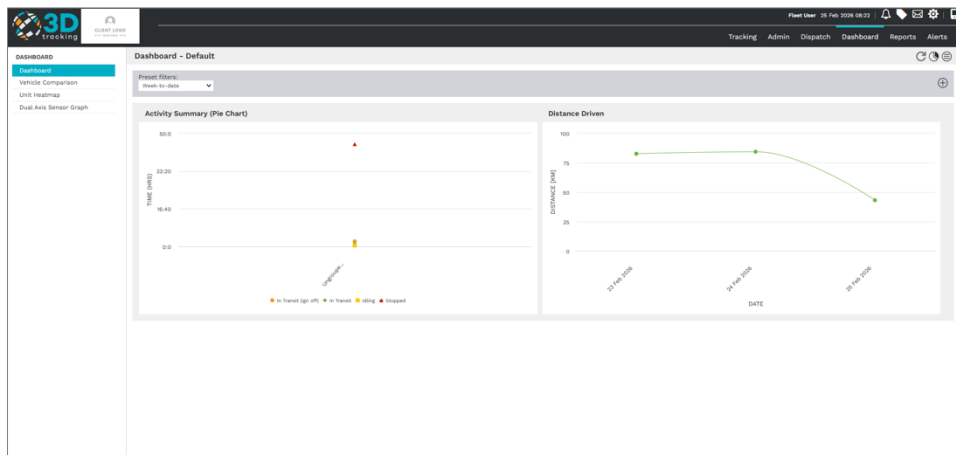

This guide shows you how to use the **Fuel Dashboard** on the 3Dtracking platform to monitor fleet fuel usage in real time, identify inefficiencies, and create customized dashboard charts that support better decision-making.

What the Fuel Dashboard does

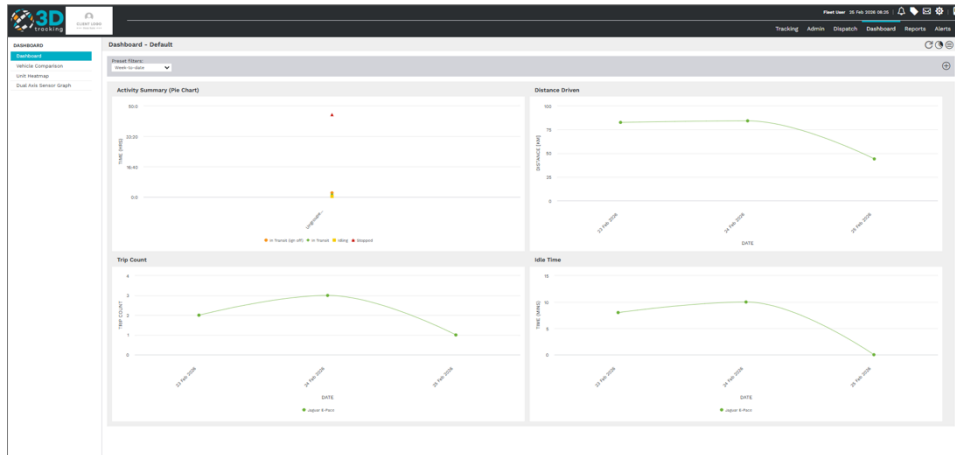

The **Fuel Dashboard** gives fleet managers a **comprehensive, real-time view** of fuel consumption across the fleet.

It allows you to:

- **Monitor usage as it happens**
- **Identify trends and inefficiencies**
- **Make informed decisions** to reduce fuel waste and manage costs

The dashboard is **fully customizable**, so you can tailor it to show the most relevant fuel metrics for your operations—all in one place.

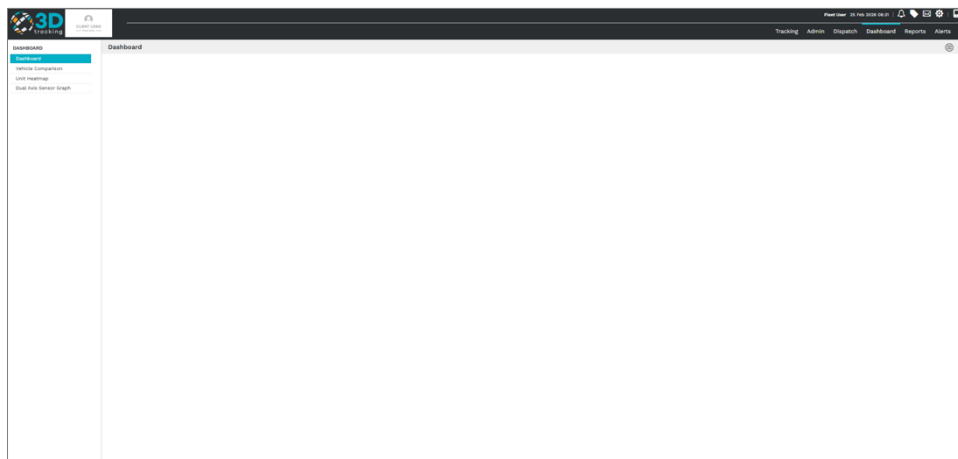

By combining **fuel-level data** with other chart types, like **real-time movement summaries** or **trip counts over time**, you get a more complete picture of fleet performance.

This holistic, **easy-to-use** dashboard setup helps reduce fuel waste and improve operational efficiency.

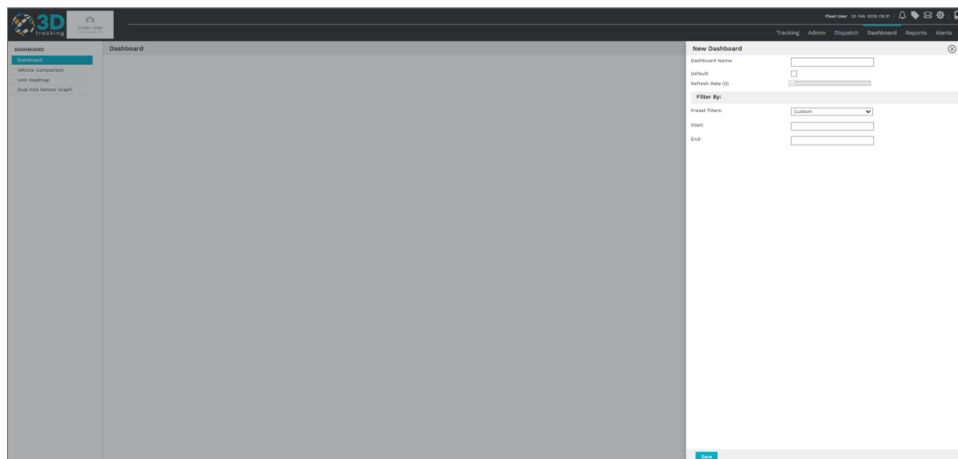

How to Add a Fuel Chart to Your Dashboard

You can add new charts from anywhere in the platform in just a few steps.

- Click the **Dashboard** button

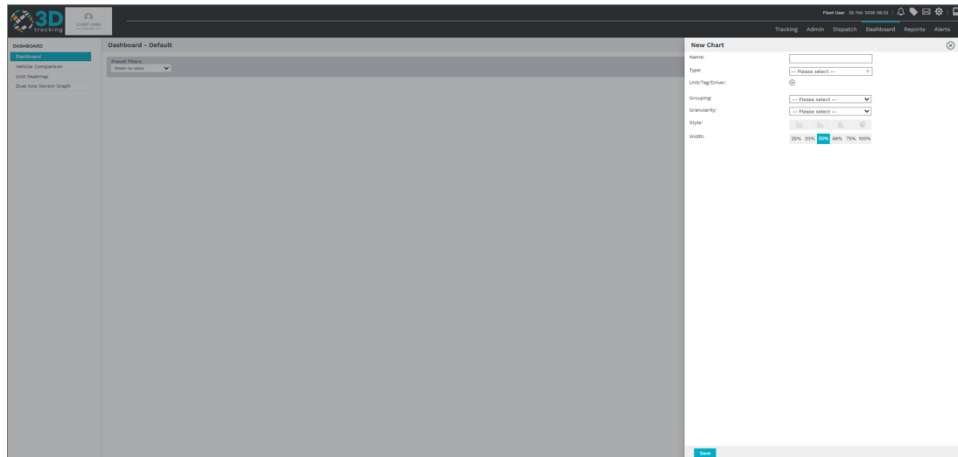

- Click the **plus (+) icon** to add a new chart

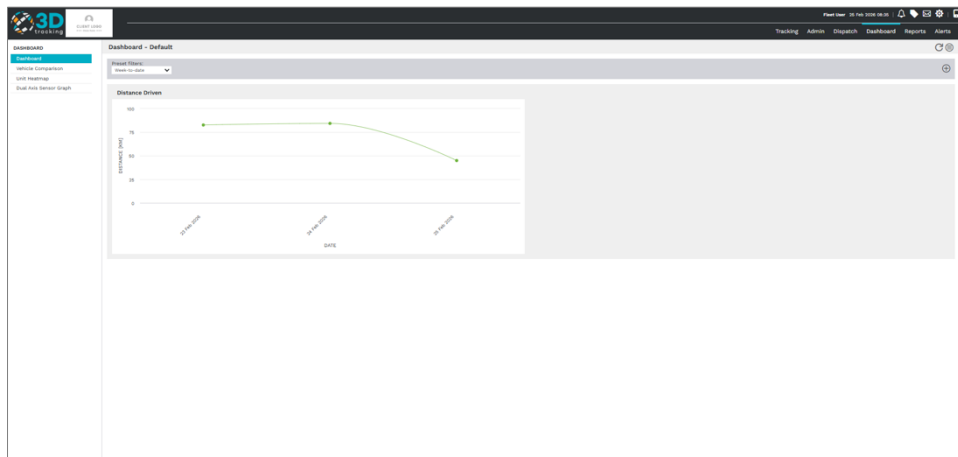

Fill in the chart setup fields:

- **Select the data source** (e.g., fuel levels, trip summary, idle time, etc.)
- **Choose a chart style** that best suits your data (bar, line, pie, etc.)
- **Select the time frame** you want the data to reflect

- Adjust the **chart size** on the dashboard layout if needed
- Click **Save**

Your chart is now visible and active. You can **drag and rearrange it** alongside other charts based on your priorities or workflow preferences.

Benefits of Fuel Dashboard Customization

With the 3Dtracking Fuel Dashboard, you can:

- Quickly spot fuel anomalies
- Compare fuel data with driver behavior and vehicle activity
- Tailor your dashboard to highlight what matters most to your team
- Reduce fuel costs through **real-time awareness and smarter planning**
